Bookey

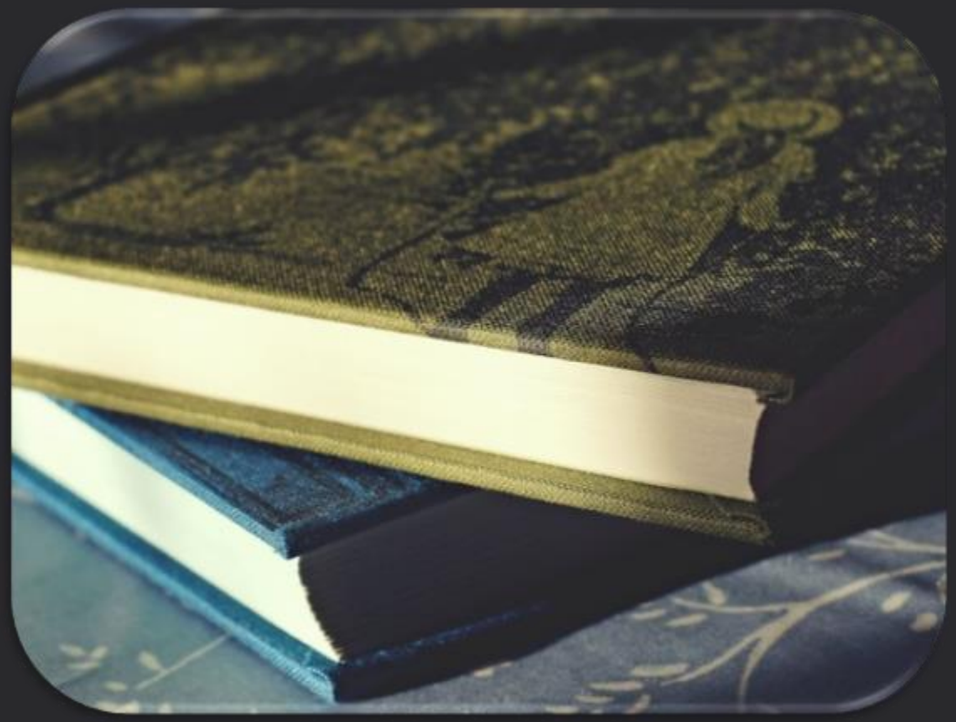
Bookey is a centralized platform to organize and manage your reading journey.

About Bookey



Bookey is a web application designed to organize and manage books in one centralized platform. It provides readers with a personalized space to track their reading journey, create custom collections, and maintaining a structured library.

- Centralized book listing platform
- Personalized reading collections
- Simple and structured user experience

The Problem

Readers face scattered book tracking

Fragmented Platforms

Books exist across multiple platforms like Goodreads, Amazon, and personal spreadsheets

No Unified System

No single place to manage all reading lists and track progress efficiently

Lost Momentum

Difficult to track reading progress and remember what books you've read or want to read

Our Solution

Bookey solves this with a unified system

All Books in One Platform

Centralize your entire collection in a single, accessible location

Organized Lists

Create custom categories like Read, Currently Reading, and Want to Read

Easy Tracking

Monitor reading progress and update statuses with simple clicks

Technology Stack

Built using modern web technologies

MongoDB

Flexible NoSQL database for storing book data, user information, and reading progress in a scalable document structure

Express.js

Backend framework handling API routes, request processing, and business logic with efficient middleware architecture

React.js

Frontend UI library creating dynamic, component-based user interface with responsive design and state management

Node.js

Server runtime enabling fast, non-blocking I/O operations and handling concurrent connections efficiently

Key Features
